CASE DEFINITION AND CLASSIFICATION: Suspected Case: Acute (< 14 days) watery diarrhea, defined as three or more loose or watery stools in a 24-hour period in a child < 5 years of age who is admitted for treatment of diarrhea to a hospital ward or emergency unit at a participating surveillance facility. Children with bloody diarrhea and nosocomial infections are excluded. Confirmed Case: A suspected case in whose stool the presence of rotavirus is demonstrated by means of an antigen-based enzyme immunoassay (EIA) or any molecular diagnostic test. Deliberately providing false or misleading, personal information on the part of the patient, or the next of kin in case of patient's incapacity, may constitute non-cooperation punishable under the Republic Act.
