

Philippine Integrated Disease
Surveillance and Response

Case Investigation Form

Severe Acute Respiratory Infection (SARI)

(ICD 10 Code: J22)

Name of DRU:				Type: ☐ RHU ☐ CHO ☐ Gov't Hospital ☐ Private Hospital ☐ Clinic ☐ Gov't Lab. ☐ Private Lab. ☐ Airport/Seaport ☐ Others_____							
Address:				Source: ☐ Surveillance ☐ Outbreak							
I. PATIENT INFORMATION:		Hospital Number:		Patient's First Name				Middle Name		Last Name	
Complete Address:				Sex: ☐ Male ☐ Female		Date of Birth:		<u>MM</u> <u>DD</u> <u>YY</u>		Age: ☐ Days ☐ Months ☐ Years	
Occupation:				Name of Workplace:							
Contact details:				Address of Workplace:							
II. HISTORY OF ILLNESS, PHYSICAL EXAMINATION AND PRE-EXISTING CONDITIONS											
Date Onset of Illness		<u>MM</u> <u>DD</u> <u>YY</u>		Date Seen/Consult		<u>MM</u> <u>DD</u> <u>YY</u>					
Signs and Symptoms:		SARI Suspect Case for Patients > 5 years old Temperature at consultation: _____ °C ☐ Fever/ Feverish Duration: _____ days/weeks ☐ Headache ☐ Cough ☐ Sore throat ☐ Difficulty of breathing ☐ Requires hospital admission ☐ Others: (Please specify) _____				SARI Suspect Case for Patients < 5 years old and EITHER ONE of the two IMCI criteria for pneumonia 1. IMCI Criteria for pneumonia: ☐ Any 2 months to 5 years of age with cough or difficult breathing ☐ Breathing faster than 60 breaths/min (infants < 2 months) ☐ Breathing faster than 50 breaths/min (2-12 months) ☐ Breathing faster than 40 breaths/min (1-5 years old) ☐ Requires hospital admission.				2. IMCI criteria for severe pneumonia ☐ Any child 2 months to 5 years of age with cough or difficult breathing With any of the following danger signs: ☐ Unable to drink or breastfeed ☐ Vomits everything ☐ Convulsions ☐ Lethargic or unconscious ☐ Chest indrawing or stridor in a calm child ☐ Requires hospital admission.	
Did you take any of the following medication(s) prior to consultation? (Please specify chosen category and duration of intake) ☐ Antivirals: _____ ☐ Antibiotics: _____ ☐ Antipyretics: _____ ☐ Others: _____				Are there any influenza-like-illness during the week in your: Household ☐ Yes ☐ No ☐ Unknown School/Daycare/Workplace ☐ Yes ☐ No ☐ Unknown				Did you have direct contact with suspected or confirmed case? ☐ Yes ☐ No ☐ Unknown Did you receive an Anti-influenza vaccine in the past year? ☐ Yes ☐ No ☐ Unknown			
History of exposure to any of the ff: ☐ Bats ☐ Poultry/Migratory Birds ☐ Camels ☐ Pigs ☐ Horses ☐ Others: _____				History of travel/residence abroad for the last 21 days: Date of travel:(mm/dd/yy) _____ ☐ Yes (specify country/ies): _____ Flight #: _____ Date of arrival: _____ Point of entry and exit: _____ ☐ No				Recent chest X-ray ☐ Done ☐ Not Done Result: _____ Date:(mm/dd/yy) _____			
Pre-existing Conditions		☐ Asthma ☐ Chronic cardiac disease ☐ Chronic liver disease ☐ Chronic neurological or neuromuscular disease ☐ Chronic renal disease ☐ Chronic respiratory disease				☐ Diabetes ☐ Haematologic disorders ☐ Immunodeficiency diseases ☐ Obesity BMI: _____ ☐ Pregnancy ☐ Undernourished ☐ Others (please specify) _____				Admitted: ☐ Yes Date:(mm/dd/yy) _____ ☐ No _____ ICU: ☐ Yes ☐ No	
Suspicious for novel respiratory virus case: (Specify respiratory pathogen): _____											

Name of investigator: _____

Case Investigation Form

Severe Acute Respiratory Infection (SARI)

(ICD 10 Code: J22)

III. LABORATORY TEST RESULTS			
Specimen Type :		Date and Time Collected (MM/DD/YY): [][][][][][][]	Date and Time of specimen receipt (MM/DD/YY): [][][][][][][]
Test Performed : ☐ Influenza rRT-PCR ☐ Virus Isolation ☐ Other (Specify) _____			
PCR AND VI (if applicable) RESULT			
☐ Influenza A(H1N1)pdm09 virus DETECTED ☐ Lineage _____ ☐ Lineage not determined	Date Released (MM/DD/YY): [][][][][][][]	☐ Influenza B virus DETECTED ☐ Lineage _____ ☐ Lineage not determined	Date Released (MM/DD/YY): [][][][][][][]
☐ Seasonal Influenza A/H1N1 virus DETECTED ☐ Lineage _____ ☐ Lineage not determined	Date Released (MM/DD/YY): [][][][][][][]	☐ Influenza A and Influenza B viruses NOT DETECTED	Date Released (MM/DD/YY): [][][][][][][]
☐ Seasonal Influenza A/H3N2 virus DETECTED ☐ Lineage _____ ☐ Lineage not determined	Date Released (MM/DD/YY): [][][][][][][]	☐ MERS Coronavirus DETECTED	Date Released (MM/DD/YY): [][][][][][][]
☐ Influenza A/H5N1 virus DE- TECTED	Date Released (MM/DD/YY): [][][][][][][]	☐ Other pathogen DETECTED ; Specify : _____	Date Released (MM/DD/YY): [][][][][][][]
☐ Influenza A/H7N9 virus DE- TECTED	Date Released (MM/DD/YY): [][][][][][][]	☐ Sample was tested at least twice, with INCONCLUSIVE TEST RESULTS (most likely due to poor specimen quality)	Date Released (MM/DD/YY): [][][][][][][]
☐ Influenza A virus DETECTED ; subtype not determined (most likely due to low virus titer)	Date Released (MM/DD/YY): [][][][][][][]	☐ Test not performed. Specimen REJECT- ED due to : _____ Specimen recollection recommended	Date Released (MM/DD/YY): [][][][][][][]
IV. CLINICAL MANAGEMENT AND OUTCOME			
Antibiotics	☐ Yes ☐ No ☐ Unknown If Yes, please specify _____	Bacterial Testing	☐ Yes ☐ No ☐ Unknown If Yes, please specify result _____
Antivirals	☐ Yes ☐ No ☐ Unknown If Yes, please specify _____	Other Therapeutic Procedures	☐ Yes ☐ No ☐ Unknown If Yes, please specify _____
Fluid Therapy	☐ Yes ☐ No ☐ Unknown If Yes, please specify fluids given _____	Oxygen	☐ Yes ☐ No ☐ Unknown
Intubation	☐ Yes ☐ No ☐ Unknown	Pulse oximeter	☐ Yes ☐ No ☐ Unknown
Final Diagnosis			
Outcome at Discharge	☐ Alive ☐ HAMA ☐ Died ☐ Unknown ☐ Transferred to other healthcare setting Improved Deteriorating		
Date of Discharge			

Case Investigation Form

Severe Acute Respiratory Infection (SARI)(ICD 10 Code: **J22**)**CASE DEFINITION/CLASSIFICATION:****INFLUENZA- LIKE-ILLNESS (ILI)**

Suspected case: A person with acute respiratory infection, with measured fever of $\geq 38^{\circ}\text{C}$ and cough with onset within the last 10 days.

Probable case: Not applicable

Confirmed case: A suspected case that is laboratory-confirmed (used mainly in epidemiological investigation rather than surveillance).

SEVERE ACUTE RESPIRATORY INFECTION (SARI)**SARI Suspect Case for Persons > 5 years old:**

An acute respiratory infection with:

- history of fever or measured fever of $\geq 38^{\circ}\text{C}$;
- and cough;
- with onset within the last 10 days;
- and requires hospitalization
- WITH difficulty of breathing; OR

-A suspect case of severe undiagnosed pneumonia, Acute Respiratory Distress Syndrome, Severe Respiratory Disease due to Novel Respiratory Pathogens

SARI Suspect Case for Patients < 5 years old:

EITHER:

IMCI criteria for pneumonia

Any child 2 months to 5 years of age with cough or difficult breathing, AND:

- Breathing faster than 60 breaths/min (infants < 2 months)
- Breathing faster than 50 breaths/min (2-12 months)
- Breathing faster than 40 breaths/min (1-5 years old)

OR:

IMCI criteria for severe pneumonia

Any child 2 months to 5 years of age with cough or difficult breathing and any of the following danger signs:

- Unable to drink or breastfeed
- Vomits everything
- Convulsions
- Lethargic or unconscious
- Chest indrawing or stridor in a calm child

AND

Requires hospital admission.

Notes:

- The requirement of “hospital admission” is meant to imply that in the judgment of a treating clinician the patient has an illness that is severe enough to require inpatient medical care.
- “Shortness of breath or difficulty breathing” is intended to capture dyspnea or air hunger. This does not refer to nasal congestion or other upper airway obstruction.
- “History of fever” does not require a history of documented fever and may include a patient’s subjective report of having a fever or feeling “feverish”.
- SARI may reflect a new illness superimposed on an underlying condition or older illness
- **SARI is not equivalent to classic pneumonia** and would not always present as pneumonia. It is expected that much of the severe respiratory disease associated with influenza would be due to exacerbations of chronic lung disease or heart disease, for example, and would not include an admitting diagnosis of pneumonia.

PROBABLE CASE

A person fitting the definition above of a “Suspect Case” with clinical, radiological, or histopathological evidence of pulmonary parenchyma disease (e.g. pneumonia or ARDS) but no possibility of laboratory confirmation either because the patient or samples are not available or there is no testing available for other respiratory infections.

CONFIRMED CASE: A suspected case that is laboratory-confirmed.
