4. CASE CLASSIFICATION, OUTCOME, AND STATUS

4.1. Case Classification

Suspect	Any individual, regardless of age, with the following signs and symptoms: Fever (38°C or more) or hot to touch; AND Maculo-papular rash (non-vesicular) AND At least one of the following: cough, coryza (runny nose), or conjunctivitis (red eyes)
Laboratory-Confirmed Measles Case	A suspected measles case that has been confirmed by a proficient laboratory as positive for Measles IgM antibodies and/or positive for Measles virus isolation or Polymerase Chain Reaction (PCR)
Laboratory-Confirmed Rubella Case	A suspected measles case with a positive laboratory test result for Rubella-specific IgM antibodies or other laboratory test method
Epidemiology-linked Measles Case	A suspected measles case that has not been confirmed by a laboratory but was geographically and temporally related with dates of rash onset occurring between 7 and 23 days apart from a laboratory-confirmed case or another epidemiologically confirmed measles case
Epidemiology-linked Rubella Case	A suspected case who has direct contact with another laboratory confirmed rubella case with rash onset occurred 12-23 days before the present case
Clinically Compatible Measles	A suspected measles case, for which no adequate clinical specimen was taken and the case has not been linked epidemiologically to a laboratory confirmed case of measles or other communicable disease OR laboratory confirmation is still pending.
Non-measles/Rubella Discarded Case	A suspected case that has been investigated and discarded as a non-measles (non-rubella) when any of the following are true: - Negative laboratory testing in a proficient laboratory on an adequate specimen collected during the proper time period after rash onset - Epidemiological linkage to a Laboratory confirmed outbreak of another communicable disease that is not measles / rubella - Confirmation of another etiology
